Team Members:
Everett Prussak
Aidan Lewis Grenz

Idea:
Our Final Project is going to act as a Soccer Website. At the start screen, you can sign-in as a team, player, or coach. Teams will have the most power on the website, meaning that they can schedule games versus other teams and will also be able edit match statistics. Coaches will have some power with scheduling, but will be able to view standings, team stats, and more. Players will be able to view the games they played, their stars, and some more features.

The front-end we will be using is HTML and Flask. Flask allows us to use Python and connect HTML pages easily.

Entities:

team						
teamID	teamName	teamCity	totalGoals	wins	losses	coachID*

player						
playerID	name	age	position	goals	teamID*	

coach				
coachID	name	wins	losses	active

game				
gameID	homeID*	awayID*	homeGoals	awayGoals

goal		
goalID	playerID*	gameID*
